

Description

Ipe is a family of wall lamps providing indirect light both upward and downward, which guarantees an excellent visual comfort as well as an unexpected luminous effect. The smallest version functions with a halogen light bulb, and all the other models function with high-performance energy-saving light bulbs. Ipe is made of aluminium, polished, and painted. The shape of the device draws its inspirations from metal beams used in architecture, hence the name of the lamp. It is original and yet discreet; its small dimensions and the fact that it is easy to assemble make it a very practical lamp both at home and in public spaces.

Materials

Powder-coated extruded aluminium wall fitting and body; die-cast aluminium lateral sealing caps, either polished and chromed, or painted. Sanded PC diffusers.
