

The LED panel illuminates according to the selected setting on the variable browning control. The display acts as a toasting progress indicator, counting down how long is left in the toasting cycle. The toaster beeps when the cycle is complete.

An internal smart chip lowers bread into the toasting slots with a single touch and also regulates the toasting time. On the 'A Bit More™' setting, bread is automatically lowered for additional toasting time.

The 'Auto Lift and Look™' feature automatically raises the bread carriage during toasting without canceling or resetting the cycle. This enables you to view, and if necessary, cancel the browning cycle at any time.

#### Technical Specifications

Materials	Brushed die-cast metal
Capacity	2-slice 1.2" wide by 5.2" deep
Key features	Intelligent one-touch auto lowering Toasting progress LED Variable browning control Innovative Auto 'Lift and Look™', and 'A Bit More™', functions Defrost, Bagel and Cancel
Element	900 watt
